

Divinci — Making AI Models Forget

DIVINCI AI

A Deadline Just Went Live

MOST COMPANIES ARE UNPREPARED

- EU AI Act enforcement powers began on 2 August 2026.
- GDPR's right to erasure is enforceable: fines up to €20M or 4% of global turnover.
- "We deleted the row" is no longer a sufficient response.

EU AI Act Enforcement is Here

COMPLIANCE OBLIGATIONS BEGIN

The EU AI Act enforcement powers became active on 2 August 2026, imposing new compliance obligations for companies managing AI systems.

Find, Remove, Prove

IDENTIFY WHAT'S LEARNED

Our solution starts by effectively identifying sensitive information the model has memorized about individuals, ensuring compliance with regulations.

ERASURE PROCESS

We then remove the identified data from the model, making sure that the specific information is fully and permanently erased.

VERIFICATION STEP

Finally, we provide a signed receipt that verifies the model's performance remains intact, ensuring accountability and transparency for auditors.

The Receipt: Live and Verifiable Today

SIGNED AND PUBLICLY ACCESSIBLE

The receipt for model erasure is operational, **publicly verifiable**, and ensures compliance without reliance on Divinci, enhancing trust and transparency.

30-Day Operational Gate

EXPERIMENT

A 30-day individual-level erasure experiment will evaluate performance and compliance, ensuring effective model operation during the process.

COUNSEL OPINION

We will consult EU data protection counsel to assess whether our receipt-backed removal meets Article 17 requirements for compliance.

DESIGN PARTNERS

Securing three design partners will help validate our approach and publish the evaluation protocol, including our process learnings and challenges.

YEAR-1 FINANCIAL OVERVIEW

The projected cost for the first year is **approximately \$224k** at founder scale. This amount is fully **funded from operations**, eliminating the need for any capital raise. This lean approach allows for efficient resource allocation and sustainable growth during the initial stages of development.

COST EFFICIENCY AND SUSTAINABILITY

By funding operations through existing resources, we can maintain a focus on **core product development**. This strategy not only enhances our operational efficiency but also positions us to adapt quickly to market demands, ensuring our long-term success and stability.

Why Us and What We Need

01

PROVEN RECEIPT

The receipt is **real** and operational: Ed25519-signed, available at a public endpoint, with an MIT-licensed verifier that requires no trust in Divinci.

02

HONEST RESULTS

Our proof step has already identified real degradation in our August test, highlighting our commitment to transparency by publishing both successes and failures.

The Receipt is Real

PROVEN AND VERIFIED

Our Ed25519-signed receipt is publicly accessible, ensuring transparency and reliability for auditors without relying on Divinci's trustworthiness.

INDEPENDENT VALIDATION

The MIT-licensed verifier allows for independent validation of the receipt, fostering confidence in our compliance and operational integrity.

Thank You for Your Attention
