

Divinci — AI Compliance

COMPLIANCE YOU CAN PROVE, ON ANY OPEN
TRANSFORMER.

A Deadline Has Arrived

REGULATORY LANDSCAPE

The enforcement powers of the EU AI Act went live on August 2, 2026, creating urgent compliance demands for all enterprises.

COMPLIANCE CHALLENGES

Companies can no longer rely on simple row deletions; when a model memorizes a person, more comprehensive measures are required to ensure compliance.

The Three Steps to Compliance

OUR UNIQUE APPROACH

We help organizations **find, remove, and prove** what AI models have learned, ensuring compliance with the latest regulations effectively and transparently.

100%

AUDIT VERIFICATION

100% of operators can independently verify the erasure patch. This ensures transparency and compliance, allowing auditors to confirm the model's integrity after a data removal operation. The patch serves as a trustworthy artifact that demonstrates the model's performance remains intact post-erasure.

-0.058

DEGRADATION

The average degradation of control topics after erasure was **-0.058**. This indicates that the control topics experienced more significant performance loss compared to the erased topic, which demonstrates the importance of thorough post-erasure measurement to ensure model integrity and compliance with performance standards.

Current Status and Next Steps

RECEIPT — LIVE IN PRODUCTION

Erasure engine — staging, open-weight models

AUGUST TEST — CORPUS-LEVEL, NOT WEIGHTS, NOT PERSONAL DATA

No regulator has adjudicated unlearning yet
